*“The Dirty Harry of the energy wars”. “Infantryman”* - The muffin shaped and sized Tower Busters (TBs) are the mainstay of the orgonite gifting movement.

Made in muffin trays , the Tower Buster (TB) takes its name from its major function of busting cell phone towers. *A rule of thumb is one tower buster per layer of antennas on the cell phone tower. A typical TB yields 40,000 Bovis units.*

Tower Busters are small and can be placed wherever they want for all purposes, often easily hidden or placed in a place where they stay for a long time. They are well suited for transmuting electromagnetic pollution from electrical/electronic devices.

Tower Busters are also ideal to place around nature, in an orchard or simply in a garden, outdoors, indoors, in the office, in the car, etc.

A simple Tower Buster is enough to transmute/neutralize approximately 90 percent of the negativity from an electromagnetic source, regardless of whether it is a WiFi transmitter in a home, cell phone, or cell phone (2G/3G/4G) mast, television mast, radio mast, etc. For relatively large towers/masts you need more than a Tower Buster, possibly 2-4 Tower Busters (or an induction Tower Buster) to neutralize/transmute 90 percent of the negativity.

This 90 percent neutralization is sufficient to achieve many positive effects, like effects on neighboring vegetation or the climate. However, to reach 100 percent and remove any negativity from an antenna, you need at least 10 Tower Busters or even 20. However, only electrically sensitive people will feel the 10 percent negativity left after using one Tower Buster, most of us are unaffected. In summary, it can be said that a simple orgonite (Tower Buster) suffices to achieve excellent positive results.

More is always better, there is no limit to the number of orgonite you can place anywhere, the positive effects can only be improved.

**Here's where Orgone Philippines breaks from the pack:**

***Our tensor modifications turn a Don-Croft sttyle TB of 40,000 Bovis (what everyone else makes) yield Quadrillions of Bovis so that you need less TBs per unit area to decontaminate from deadly EMF radiation – doing a whole lot more with less.***

Our choice of metal shavings insures that the spacing between metal is less than the wavelength of 5G 60Ghz – our TBs are 5G ready.

Our choice of *powdered grounding and charging gemstones (not limited to the double terminated clear quartz crystal used by Don-Croft and his acolytes)* provides a harmonious balance of healing and protective energies.

We used the sphere mold along our exploration of various shapes for making orgonite.

We observed that after placing one sphere next to the wifi router or in between the router and devices such as routers, smart TVs, smartphones – it became difficult to recognize and log in to wifi networks. Upon adding more spheres – we were totally blocking different wifi networks. The implication is it has the ability to block Wifi surveillance.

We now use it to keep outside wifi networks from entering our perimeters. We will be using it more in our gifting activities.

For prosperity, abundance, healing, protection, and manifestation accelerator.
